SUPERSEDING

MIL-S-19500/102 (NAVY)

19 July 1962

(See 6.2)

## MILITARY SPECIFICATION

## SEMICONDUCTOR DEVICE, TRANSISTORS, NPN, SILICON, HIGH-POWER

## TYPES 2N1016B, 2N1016C, AND 2N1016D

This specification is mandatory for use by all Departments and Agencies of the Department of Defense.

## 1. SCOPE

1.1 Scope. This specification covers the detail requirements for a high-power, NPN, silicon transistor.

1.2 Physical dimensions. See figure 1.

1.3 Maximum ratings.

**SPECIFICATION**

**MILITARY**

MIL-S-19500 - Semiconductor Devices, General Specification for.

**STANDARDS**

**MILITARY**

MIL-STD-202 - Test Methods for Electronic and Electrical Component Parts.

MIL-STD-750 - Test Methods for Semiconductor Devices.

(Copies of specifications, standards, drawings, and publications required by suppliers in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

2.2 Other publications. The following document forms a part of this specification to the extent specified herein. Unless otherwise indicated, the issue in effect on date of invitation for bids or request for proposal shall apply.

**NATIONAL BUREAU OF STANDARDS**

Handbook H28 - Screw-Thread Standards for Federal services.

(Application for copies should be addressed to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.)

**3. REQUIREMENTS**

3.1 General. Requirements shall be in accordance with MIL-S-19500, and as specified herein.

3.2 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-S-19500.

3.3 Design, construction, and physical dimensions. Transistors shall be of the design, construction, and physical dimensions shown on figure 1.

3.4 Performance characteristics. Performance characteristics shall be as specified in tables I, II, and III.

3.5 Marking. The following marking specified in MIL-S-19500 may be omitted from the body of the transistor at the option of the manufacturer:

- (a) Country of origin.
- (b) Manufacturer's identification.

**4. QUALITY ASSURANCE PROVISIONS**

4.1 Sampling and inspection. Sampling and inspection shall be in accordance with MIL-S-19500, and as specified herein.

4.2 Qualification inspection. Qualification inspection shall consist of the examinations and tests specified in tables I, II, and III.

4.3 Quality conformance inspection. Quality conformance inspection shall consist of groups A, B, and C inspections.

## NOTES:

1. Dimensions are in inches.
2. Metric equivalents (to the nearest .01 mm) are given for general information only and are based upon 1 inch = 25.4 mm.
3. See NBS Handbook H28. 5/16 - 24 UNF-2A.
4. Two leads.
5. Reference point for temperature measurement.
6. Collector shall be internally connected to the mounting base.

MIL-S-19500/102A

4.3.1 Group A inspection. Group A inspection shall consist of the examinations and tests specified in table I.

4.3.2 Group B inspection. Group B inspection shall consist of the examinations and tests specified in table II.

4.3.3 Group C inspection. Group C inspection shall consist of the examinations and tests specified in table III. This inspection shall be conducted on the initial lot and thereafter every 6 months during production. Upon failure of any Group C subgroups or upon determination by the inspector that Group C tests are not being met, the inspector shall require lot by lot inspection for a minimum of 3 consecutive lots on the failing Group C subgroups.

4.3.4 Group B and group C life-test samples. Samples that have been subjected to group B, 340-hour life-test, may be continued on test for 1,000-hours in order to satisfy group C life-test requirements. These samples shall be predesignated, and shall remain subjected to the group C 1,000-hour acceptance evaluation after they have passed the group B, 340-hour acceptance criteria. The cumulative total of failures found during 340-hour test and during the subsequent interval up to 1,000 hours shall be computed for 1,000 hour acceptance criteria, see 4.3.3.

4.4 Methods of examination and test. Methods of examination and test shall be as specified in tables I, II, and III.

4.4.1 Terminal strength (stud torque). Acceptance criteria after the stud torque test for external threaded parts (dimension "T" of figure 1) shall be in accordance with handbook H28.

4.4.2 Solderability. The solderability test shall apply to the two, lug-terminals only. The depth of immersion is to be within 1/4-inch of the seating plane. Acceptance criteria shall be that each termination is 95-percent covered by a continuous new solder coating to within 3/8-inch  $\pm$  1/32-inch of the seating plane.
