

## FEATURES

- 30 Volt Differential Input Range
- 75 nA Input Bias Current
- Wide Common Mode Voltage Range

## APPLICATIONS

- Signal Conditioning Amplifiers
- Voltage Followers
- Comparators

## DESCRIPTION

The LM101A and LM107 are general purpose operational amplifiers, featuring low bias current and the ability to operate with high input differential voltages up to 30 Volts. Unlike many FET input amplifiers, the output of the LM101A/107 does not reverse if the common mode range is exceeded, making them particularly useful in comparator and oscillator circuits.

The LM101A uses external compensation, allowing the frequency response and slew rate to be optimized for the application. The LM107 is identical to the LM101A with the exception that the compensation capacitor is internal. Linear's LM101A and LM107 include improved design and processing techniques resulting in superior long term stability and reliability over previous devices. The curve of bias current versus differential input voltage indicates that a minimal change in input current occurs over a wide range of input signal, which is important in many applications.

PSRR	Power Supply Rejection Ratio	$R_S \leq 50K\Omega$	●	80	96	70	96	dB	
	Input Voltage Range	$V_S = \pm 20V$ $V_S = \pm 15V$	●	± 15				V	
			●	+ 15		± 12	+ 15	V	
			●	- 13		- 13		V	
$V_{OUT}$	Output Voltage Swing	$V_S = \pm 15V$ , $R_L = 10K\Omega$ $R_L = 2K\Omega$	●	± 12	± 14	± 12	± 14	V	
			●	± 10	± 13	± 10	± 13	V	
$R_{IN}$	Input Resistance	$T_A = 25^\circ C$		1.5	4.0	0.5	2.0	M $\Omega$	
$I_S$	Supply Current	$T_A = 25^\circ C$ , $V_S = \pm 20V$	●	1.8	3.0	1.8	3.0	mA	
		$T_A = 125^\circ C$ , $V_S = \pm 20V$	●	1.2	2.5			mA	

The ● denotes the specifications which apply over the full operating temperature range.

**Note 1:** Unless otherwise noted; all measurements are made with unity gain compensation ( $C_1 = 30\text{pf}$  for the LM101A/301A); these specifications apply for  $\pm 5V \leq V_S \leq \pm 20V$  for the LM101A/LM107; and  $\pm 5V \leq V_S \leq \pm 15V$  for the LM301A/LM307.

**Note 2:** For supply voltages less than  $\pm 15$  Volts, the maximum input voltage is equal to the supply voltage.

**Note 3:** The output may be shorted to ground or either power supply indefinitely, provided the case temperature is below  $125^\circ C$  for the LM101A/107 and below  $70^\circ C$  for the LM301A/307.

# TYPICAL PERFORMANCE CHARACTERISTICS (LM101A)

## Single Pole Compensation

$$C_1 \geq \left( \frac{R_1}{R_1 + R_2} \right) (30 \text{ pf})$$

$C_1 = 30 \text{ pF}$  for unity gain stability. At gains above 1 frequency response can be maximized by decreasing  $C_1$ .

## Open Loop Frequency Response

## Single Pole Large Signal Frequency Response

## Single Pole Voltage Follower Pulse Response

## Two Pole Compensation

$$C_1 \geq \frac{R_1}{R_1 + R_2} (30 \text{ pf})$$

$C_1 = 30 \text{ pF}$   $C_2 = 10C_1$  for unit gain. At gains above 1, frequency response can be maximized by decreasing  $C_1$  and  $C_2$ .

## Open Loop Frequency Response

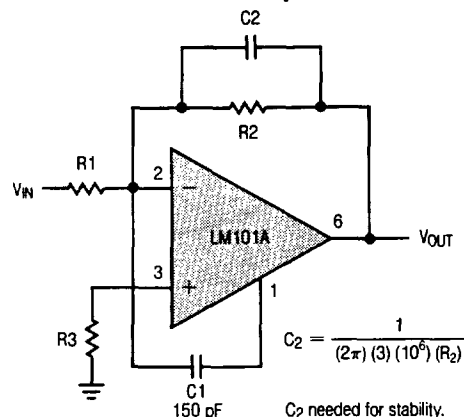

## 2 Pole Large Signal Frequency Response

## 2 Pole Voltage Follower Pulse Response

## Feedforward Compensation

$$C_2 = \frac{1}{(2\pi)(3)(10^6)(R_2)}$$

$C_2$  needed for stability.

## Open Loop Frequency Response

## Feedforward Large Signal Frequency Response

## Feedforward Inverter Pulse Response
